

Claude Code Tracing Setup Guide

0. Download these files before the setup.

[cc_trace_proxy.py](#)

[setup.sh](#)

[NOTE] Claude Code CLI version should be same or lower than v2.1.153 to run with Friendly Model APIs... To downgrade, run below command.

```
npm install -g @anthropic-ai/claude-code@2.1.153
```

With Friendly Model API x Claude CLI v2.1.153

1. Setup `.claude/settings.json`

```
{
  "env": {
    "ANTHROPIC_MODEL": "zai-org/GLM-5.1",
    "ANTHROPIC_AUTH_TOKEN": "<YOUR_FRIENDLI_KEY>"
  },
  "enabledPlugins": {
    "clangd-lsp@claude-plugins-official": true
  },
  "showThinkingSummaries": true
}
```

2. Then run [setup.sh](#) script.

If your proxy is not working correctly, run `kill -f cc_trace_proxy` and run `./setup.sh` again.

```
chmod +x setup.sh
./setup.sh
source ~/.zshrc
```

3. Now launch claude with `claude-trace` mode && upstream baseURL.

For current engine version, "showThinkingSummaries" option will generate 422 errors. So we enable `CC_STRIP_THINKING_DISPLAY=1`.

Launch command

```
# OK; Default
CC_TRACE_UPSTREAM=https://api.friendly.ai/serverless \
CC_STRIP_THINKING_DISPLAY=1 \
claude-trace

# if you want to strengthen reasoning effort
CC_TRACE_UPSTREAM=https://api.friendly.ai/serverless \
CC_STRIP_THINKING_DISPLAY=1 \
CC_TRACE_INJECT_FIELDS='{"reasoning_effort":"high"}' \
claude-trace
```

You need to be logged out from Claude Code to use `ANTHROPIC_AUTH_TOKEN`.

With Anthropic Models x Claude CLI

1. Setup `.claude/settings.json`

```
{
  "enabledPlugins": {
    "clangd-lsp@claude-plugins-official": true
  },
}
```

```
"showThinkingSummaries": true  
}
```

2. Then run setup.sh script, and run claude with `claude-trace` mode.

```
chmod +x setup.sh  
./setup.sh  
source ~/.zshrc  
  
claude-trace
```

TIPs

When restarting proxy →

```
pkill -f cc_trace_proxy  
./setup.sh
```

Proxy health check →

```
pgrep -fl cc_trace_proxy  
tail -f ~/.cc-trace/proxy.log
```

Example trace file (FriendliAI GLM-5.1 Model API x reasoning_effort":"high" x Claude CLI v2.1.153 Setting)
